

Yash Anpat

Pune, Maharashtra | +91 9158041144 | anpatyash16@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Computer Engineering undergraduate with strong foundations in Python, SQL, machine learning, data preprocessing, and backend engineering. Experienced in developing end-to-end AI and analytics applications involving predictive modeling, REST APIs, RAG-based systems, semantic search, explainable AI, and model deployment. Strong problem-solving and analytical skills with a focus on practical, data-driven engineering and production-oriented AI/ML solutions.

EDUCATION

AISSMS College of Engineering, Pune
Bachelor of Engineering in Computer Engineering

2023 – 2027
CGPA: 8.54 / 10

TECHNICAL SKILLS

Languages: Python, C++, SQL
Machine Learning: Pandas, NumPy, Scikit-learn, XGBoost, Feature Engineering, Data Preprocessing, Regression, Classification, Model Evaluation, SHAP, ML Pipelines
AI & Backend: RAG, LangChain, Sentence Transformers, FAISS, Prompt Engineering, LLM Integration, FastAPI, Flask, Django, REST APIs
Databases & Tools: PostgreSQL, MySQL, SQLite, React, Streamlit, AWS EC2, Git, GitHub

PROJECTS

Predictive Equipment Maintenance Platform | *Python, XGBoost, FastAPI, PostgreSQL, React, SHAP*

- Built an end-to-end predictive maintenance platform using an XGBoost classification pipeline to estimate equipment failure probability from industrial telemetry data.
- Implemented data preprocessing, feature engineering, model training, evaluation, inference, and feature-contract validation for reliable prediction inputs and model inference.
- Developed FastAPI services for telemetry ingestion, prediction requests, prediction history, configurable risk scoring, and maintenance recommendations with PostgreSQL persistence.
- Integrated SHAP-based local and global feature explanations with a React dashboard to visualize telemetry trends, risk scores, prediction history, and model insights.

AI Document Assistant (RAG Chatbot) | *Python, FAISS, Sentence Transformers, GPT-OSS 20B, Groq, Streamlit*

- Built a Retrieval-Augmented Generation (RAG) chatbot for answering questions from uploaded PDF documents using semantic search and grounded context retrieval.
- Implemented page-aware PDF extraction, overlapping text chunking, Sentence Transformer embeddings, FAISS vector indexing, and top-k similarity-based context retrieval.
- Integrated GPT-OSS 20B through Groq to generate grounded responses from retrieved document context using prompt-based grounding and source/page references.
- Built an interactive Streamlit interface supporting PDF upload, document processing, conversational querying, and document-specific question answering.

Food Delivery Time Prediction | *Python, Scikit-learn, Flask, Pandas*

- Built a machine learning regression application to estimate food delivery time from delivery, vehicle, traffic, weather, and location-related features.
- Performed data preprocessing and feature engineering to construct a 29-feature prediction input, including categorical encodings and geolocation features.
- Trained and evaluated the regression model using Pandas and Scikit-learn, preparing the pipeline for inference through a Flask web application.
- Integrated OpenCage geocoding to convert restaurant and delivery locations into coordinates for location-based prediction and deployed the application as a web service.

LEADERSHIP & RESPONSIBILITIES

Placement Student Coordinator – AISSMS College of Engineering	2026 – 2027
Sponsorship & Public Relations Head – ET2025, AISSMS College of Engineering	2025
Photography Head – Sports Media Club	2025 – Present
Programming Department Member – CIPHERS Technical Club	2025 – 2026

CERTIFICATIONS

AWS re/Start Program – Amazon Web Services
Python Basics – HackerRank
Advanced Python Concepts – CodeWithHarry Python Bootcamp
Python Development Internship – aXcentra
