PROFESSIONAL SUMMARY

Computer Engineering undergraduate with a strong foundation in Python, Machine Learning, and AI, experienced in building end-to-end intelligent applications from data preprocessing and model development to API integration and deployment. Passionate about developing scalable, real-world machine learning solutions with interests in predictive analytics, computer vision, and production-ready AI systems.

EDUCATION

AISSMS College of Engineering, Pune

Bachelor of Engineering in Computer Engineering

2023 – 2027

CGPA: 8.54 / 10

TECHNICAL SKILLS

Languages: Python, C++, SQL

Machine Learning: Scikit-learn, Pandas, NumPy, Feature Engineering, Data Preprocessing, Regression, Classification, Model Evaluation

AI & Backend: Computer Vision, LangChain, RAG, Prompt Engineering, Flask, FastAPI, Django, REST APIs

Databases & Tools: PostgreSQL, MySQL, SQLite, Git, Docker, AWS EC2, GitHub, VS Code

PROJECTS

Predictive Equipment Maintenance Platform | *Python, FastAPI, XGBoost, PostgreSQL, React, SHAP*

- Built an end-to-end predictive maintenance platform using an XGBoost classification pipeline trained on the AI4I 2020 Predictive Maintenance Dataset to estimate equipment failure probability.
- Developed the ML workflow for feature preprocessing, model training, evaluation, inference, and production feature-contract validation using Scikit-learn and Python.
- Developed FastAPI REST services for equipment management, telemetry ingestion, prediction generation, maintenance recommendations, and prediction history with PostgreSQL persistence.
- Implemented SHAP-based explainable AI to identify feature contributions to failure predictions and integrated a React dashboard for telemetry trends, prediction history, risk scores, and model explanations.

AI Document Assistant (RAG Chatbot) | *Python, LangChain, FAISS, OpenAI API, Streamlit*

- Developed a Retrieval-Augmented Generation (RAG) application capable of answering document-specific queries using semantic search.
- Implemented document chunking, vector embeddings, and FAISS indexing to retrieve contextually relevant information efficiently.
- Integrated LLM-based response generation with prompt engineering to improve answer relevance and reduce hallucinations.

Food Delivery Time Prediction | *Python, Scikit-learn, Flask, Pandas*

- Built a machine learning regression model to estimate food delivery time using location, traffic, weather, and order-related features.
- Performed data preprocessing, feature engineering, model training, and evaluation using Scikit-learn to improve prediction performance.
- Deployed the trained model as a Flask web application with OpenCage API integration for real-time location processing.

LEADERSHIP & RESPONSIBILITIES

Sponsorship & Public Relations Head – ET2025, AISSMS College of Engineering

Photography Head – Sports Media Club

Programming Department Member – CIPHERS Technical Club

2025

2025 – Present

2025 – Present

CERTIFICATIONS

- AWS re/Start Program
- Python Basics – HackerRank
- Advanced Python Concepts – CodeWithHarry Python Bootcamp
- aXcentra Internship – Python Development
